Sure! Here's a list of popular **React frameworks**:

🔥 Fullstack / SSR (Server-Side Rendering) Frameworks:

- **Next.js** — Most popular for SSR, SSG, ISR, and fullstack apps.
- **Remix** — Focuses on web standards, great for nested routes and loaders.
- **Gatsby** — Static Site Generator (good for blogs, portfolios).
- **Blitz.js** — Fullstack framework built on top of Next.js.
- **RedwoodJS** — Fullstack, especially for startups and SaaS.
- **Refine** — For building admin panels, dashboards.

🧩 Component Libraries / UI Frameworks:

- **Material UI (MUI)** — Google's Material Design system for React.
- **Chakra UI** — Simple, accessible component library.
- **Ant Design** — Enterprise-level UI components.
- **Mantine** — Growing library with hooks and components.
- **React-Bootstrap** — Bootstrap components in React flavor.
- **Tailwind UI** (with TailwindCSS) — Not pure React, but often used in React projects.

⚡ Static Site Generators (besides Gatsby):

- **React Static** — For generating static sites with React.
- **Elder.js** — Focused on SEO-heavy static sites.

🎨 Animation / Motion Frameworks:

- **Framer Motion** — Best for animations in React.
- **React Spring** — Spring-physics based animation library.

🧠 State Management Frameworks:

- **Redux** — Most famous state management.

- **Recoil** — Easy, atomic state management by Facebook.

- **Jotai** — Minimalistic and scalable.

- **Zustand** — Small, fast, and scalable state management.
